

Mi Electric Shaver S500 Replacement Shaving Head

Double bladed blades

double blade

Premium quality imported steel

Electrochemical processing (ECM)

Double bladed blades and double blades

Offers two shaves in one go

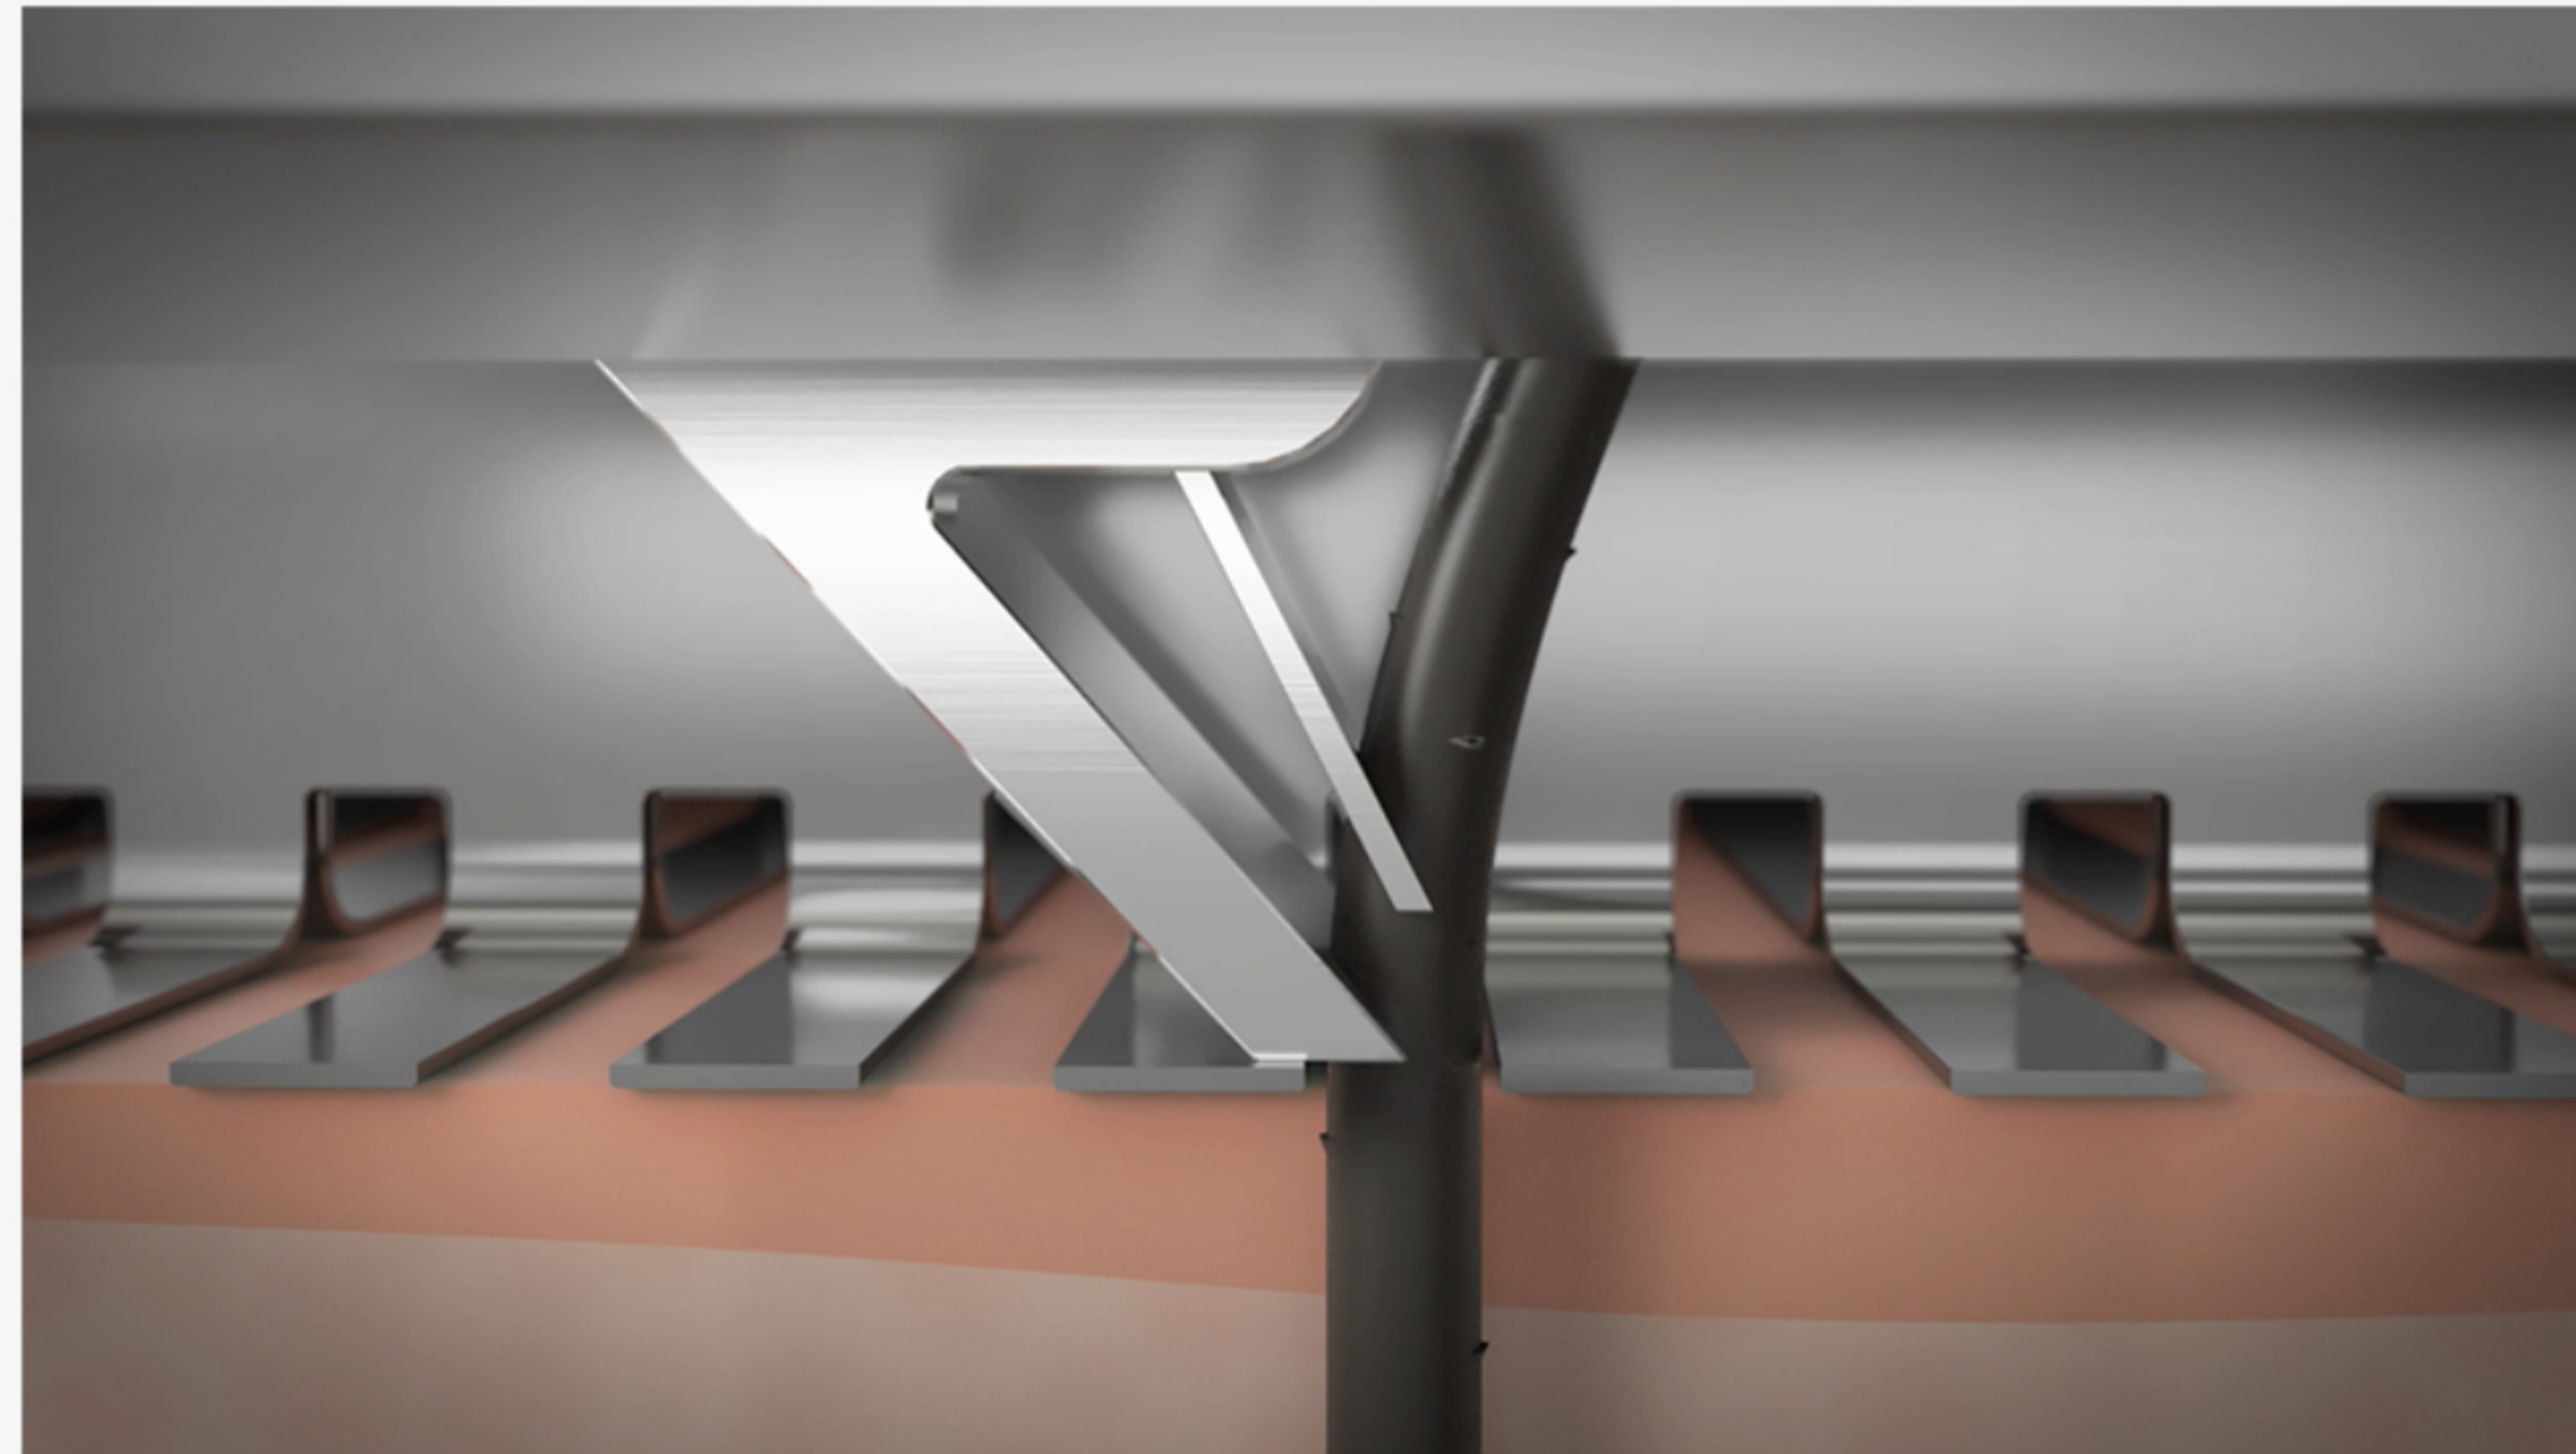

Mi Electric Shaver S500 Replacement Shaving Heads feature dual-piece blades and dual-blade design for 50% more removal than a shaver with single-blade blades, giving you two shaves in one go. The inner and outer strips have a total of 15 blades that complement each other for a fast shaving experience.

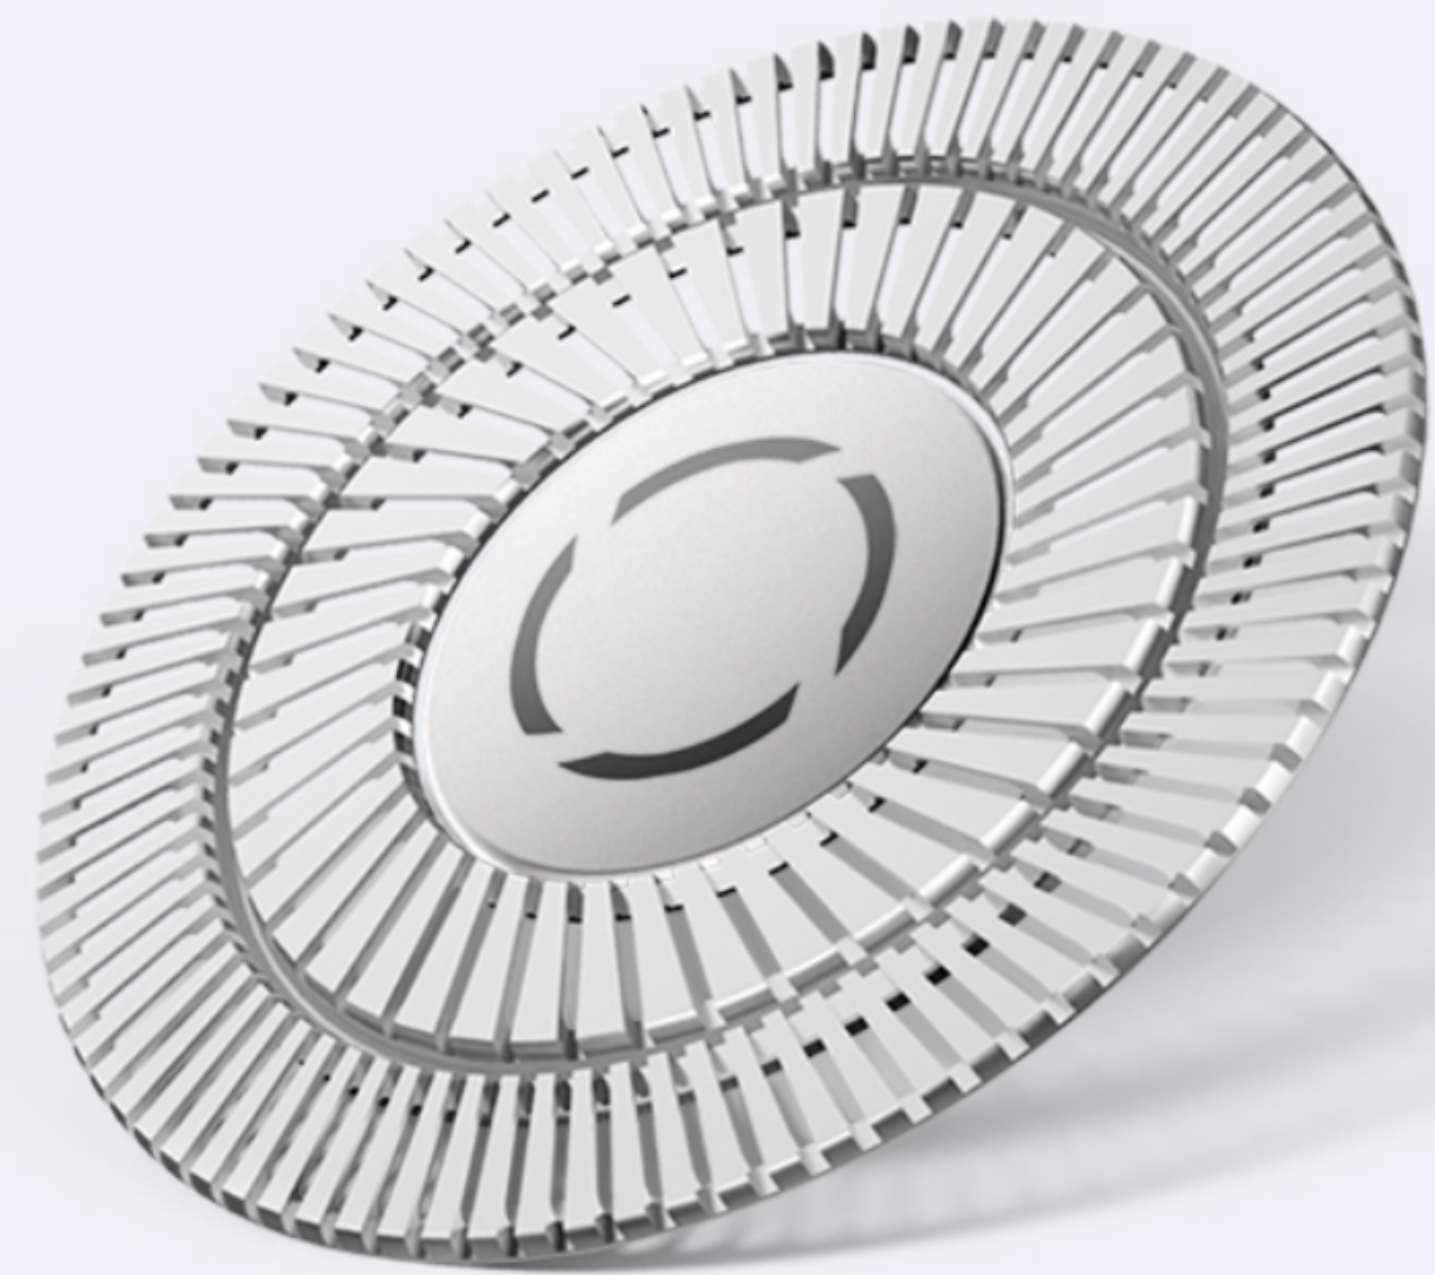

Secondary blades lift hairs so primary blades can cut

For a cleaner shave

The blades themselves have a certain thickness, which may result in shorter beards not being able to be trimmed. To solve this problem, Mi Electric Shaver S500 Replacement Shaving Heads have a thin 0.08mm secondary blade mounted on top of the outer strip of the primary blade. The secondary blade lifts hairs before the main blade quickly cuts, providing a cleaner, more thorough shave.

**Shaving heads and blades are made
of high quality imported steel**

Electrochemical processing (ECM)

Smooth blades - sharp, wear-resistant shaving heads

Blades and shaving heads are coated using the same electrochemical processing (ECM) technology used for precision medical equipment. This not only reduces the appearance of metal burrs, but also greatly improves wear resistance. The three sets of blades are flat and fit together seamlessly with the heads.

Assembly and disassembly instructions:

Apply pressure to the release port of the shaver head bracket and remove the old head.

Install the new head by aligning it with the inner slot and pressing it down.
